Criterion –I

1.3.1 Environment and Sustainability

w. e. f 2015-2016 & 2020-2021

FoundationCourse-2

ENVIRONMENTAL STUDIES

Common for BA/BCom/BSc/BBA/BCA Programmes w.e.f2015-16

Unit-I:NaturalResources

6Hrs

Definition,
scopeandimportance.Needforpublicawareness.Briefdescriptionof
; □

- Forest resources: Use and over-exploitation. Deforestation; timber extraction, mining, dams. Effect of deforestation on environment and tribal people

 - Water resources: Use and over-utilization. Effect of overutilization of surface and groundwater. Floods, drought.
 - Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources.

- Foodresources:Worldfoodproblems,Effectsofmodernagriculture;fertilizer-pesticide,salinityproblems.
- Energyresources:Growingenergyneeds, renewableandnon-renewable energy sources,useofalternateenergysources.

- Landresources:Landasresources,landdegradation,maninduced
erosionanddesertification

Unit-II:Ecosystems,Biodiversityanditsconservation

6Hrs

- Concept of an ecosystem
 - Structure and function of an ecosystemProducers, consumers and decomposers
 - Food chains, food webs and ecological pyramidsCharacteristic features of the following ecosystems:-
Forest ecosystem, Desert ecosystem, Aquatic ecosystem.
 - Value of biodiversity: Consumptive use, productive use. Biodiversity in India. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
 - Endangered and endemic species of India
Conservation of biodiversity

Unit-III:EnvironmentalPollution

6Hrs

- Definition
 - Causes, effects and control measures of:-
 - a. Air pollution

- b. Waterpollution
 - c. Soilpollution
 - d. Noisepollution
- Solidwastemanagement;MeasuresforsafeurbanandindustrialwastedisposalRoleofindividualinpreventionofpollution
 - Disastermanagement:Drought,floodsandcyclones

Unit-IV:SocialIssues andtheEnvironment**6Hrs**

- FromUnsustainabletoSustainabledevelopment
 - Waterconservation,
 - rainwaterharvesting,watershedmanagement.Climate
 - change,globalwarming,ozonelayerdepletion,Environmentprotectio
 - nAct
- WildlifeProtectionAct,ForestConservationAct

Unit-V:HumanPopulationandtheEnvironment**6Hrs**

- Populationexplosion,impactonenvironment.
- Family welfare
- ProgrammeEnvironment and
- human healthWomenand
- ChildWelfareValueEducation
- RoleofInformationTechnologyinEnvironmentand humanhealth.

ELECTIVE PAPER-VII-(B): ENVIRONMENTAL CHEMISTRY
45 hrs(3h/w)

UNIT-I

Introduction

9h

Concept of Environmental chemistry - Scope and importance of environment nowadays - Nomenclature of environmental chemistry - Segments of environment - Natural resources - Renewable Resources - Solar and biomass energy and Nonrenewable resources - Thermal power and atomic energy - Reactions of atmospheric oxygen and Hydrological cycle.

UNIT-II

Air Pollution

9h

Definition - Sources of air pollution - Classification of air pollution - Acid rain - Photochemical smog - Green house effect - Formation and depletion of ozone - Bhopal gas disaster - Controlling methods of air pollution.

UNIT-III

Water pollution

9h

Unique physical and chemical properties of water - water quality and criteria for finding of water quality - Dissolved oxygen - BOD, COD, Suspended solids, total dissolved solids, alkalinity - Hardness of water - Methods to convert temporary hard water into soft water - Methods to convert permanent hard water into soft water - eutrophication and its effects - principal wastage treatment - Industrial waste water treatment.

UNIT-IV

Chemical Toxicology

9h

Toxic chemicals in the environment - effects of toxic chemicals - cyanide and its toxic effects - pesticides and its biochemical effects - toxicity of lead, mercury, arsenic and cadmium.

UNIT-V

Ecosystem and biodiversity

9h

Ecosystem

Concepts - structure - Functions and types of ecosystem - Abiotic and biotic components - Energy flow and Energy dynamics of ecosystem - Food chains - Food web - Tropic levels - Biogeochemical cycles (carbon, nitrogen and phosphorus)

Biodiversity

Definition - level and types of biodiversity - concept - significance - magnitude and distribution of biodiversity - trends - biogeographical classification of India - biodiversity at national, global and regional level.

ListofReferencebooks

1. Fundamentals of ecology by M.C.Dash
 2. A Textbook of Environmental chemistry by W.Moore and F.A.Moore
 3. Environmental Chemistry by Samirk.Banerji
-

SEMESTER-VI

ELECTIVE PAPER-VII-(C) GREEN CHEMISTRY 45 hrs(3 h/w)

UNIT-I

10h

Green Chemistry: Introduction- Definition of green Chemistry, need of green chemistry, basic principles of green chemistry. Green synthesis- Evaluation of the type of the reaction i) Rearrangements (100% atom economic), ii) Addition reaction (100% atom economic). Organic reactions by Sonication method: apparatus required examples of Sonochemical reactions (Heck, Hundsdiecker and Wittig reactions).

UNIT-II

10h

Selection **ofsolvent:** i) Aqueous phase reactions ii) Reactions in ionic liquids, Heck reaction, Suzuki reactions, epoxidation. iii) Solid supported synthesis

Supercritical CO₂: Preparation, properties and applications, (decaffeination, dry cleaning)

UNIT-III

10h

Microwave and Ultrasound assisted green synthesis: Apparatus required, examples of MAOS (synthesis of fused anthroquinones, Leukart reductive amination of ketones)- Advantages and disadvantages of MAOS. Aldol condensation-Cannizaro reaction-Diels-Alder reactions-Strecker's synthesis

UNIT-IV

5h

Green catalysis: Heterogeneous catalysis, use of zeolites, silica, alumina, supported

UNITV

10h

Examples of green synthesis / reactions and some real world cases: 1. Green synthesis of the following compounds: adipic acid, catechol, disodium iminodiacetate (alternative Strecker's synthesis) 2. Microwave assisted reaction in water - Hoffmann elimination - methyl benzoate to benzoic acid - oxidation of toluene and alcohols - microwave assisted reactions in organic solvents. Diels-Alder reactions and decarboxylation reaction. 3. Ultrasound assisted reactions - sonochemical Simmons-Smith reaction (ultrasonic alternative to iodine)

**LABORATORYCOURSE–
VIIGREENCHEMISTRY**

PracticalPaper– ElectiveVIIC(atthe end ofsemesterVI) 30hrs(2h/W)

1. Determinationofspecificreactionrateofhydrolysisformethylacetatecatalysedbyhydrogenionatroomtemperature.
 2. DeterminationofmolecularstatusandpartitioncoefficientofbenzoicacidinBenzeneandwater.
 3. Surfacetensionandviscosityofliquids.
 4. Adsorptionofaceticacidonanimalcharcoal, verificationof Freundlischisotherm.
-

IIIB. Sc- SEMESTER-

V:BOTANYSYLLABUSPAPER-

VI:PLANTECOLOGY&PHYTOGEOGRAPHY

Total hours of teaching 60 hrs @ 3 hrs per week

UNIT-I.Elements of Ecology

(12hrs)

1. Ecology: definition, branches and significance of ecology.
2. Climatic Factors: Light, Temperature, precipitation.
3. Edaphic Factor: Origin, formation, composition and soil profile.
4. Biotic Factor: Interactions between plants and animals.

UNIT-II.Ecosystem Ecology

(12 hrs)

1. Ecosystem: Concept and components, energy flow, Food chain, Food web, Ecological pyramids.
2. Productivity of ecosystem - Primary, Secondary and Net productivity.
3. Biogeochemical cycles - Carbon, Nitrogen and Phosphorous.

UNIT-II Population & Community Ecology

(12hrs)

1. Population - definition, characteristics and importance, outlines - ecotypes.
2. Plant communities - characters of a community, outlines - Frequency, density, cover, life forms, competition.
3. Interaction between plants growing in a community.

UNIT-IV Phytogeography

(12hrs)

1. Principles of Phytogeography, Distribution (wides, endemic, discontinuous species)
2. Phytogeographic regions of India.
3. Phytogeographic regions of World.
4. Endemism - types and causes

UNIT-V:Plant Biodiversity and its importance

(12

1. Definition, levels of biodiversity - genetic, species and ecosystem.
2. Biodiversity hotspots - Criteria, Biodiversity hotspots of India.
3. Loss of biodiversity - causes and conservation (*In-situ* and *ex-situ* methods).
4. Seed banks - conservation of genetic resources and their importance

Suggested activity: Collection of different soils, studying their texture, observing polluted water bodies, student study projects, debates on man's activity on ecosystem and biodiversity conservation methods, visiting nearest natural vegetation area. Visit to NGO, working in the field of biodiversity and report writing; to study Honey Bees and plants yielding honey.

ElectiveVII-(C):(RenewableEnergy)

Semester–VI
ElectivePaper–VII-(C):RenewableEnergy

No.ofHoursperweek:04	Total
----------------------	-------

Lectures:60UNIT-I(12hrs)

- 1. IntroductiontoEnergy:** Definitionandunitsofenergy,power,Formsofenergy, Conservation of energy, second law of thermodynamics, Energy flow diagram to the earth.Originandtimescaleoffossilfuels,Conventionalenergysources,Roleofenergyineconomic developmentandsocialtransformation.
- 2. EnvironmentalEffects:** Environmentaldegradationduetoenergyproductionandutilization, air and water pollution, depletion of ozone layer, global warming,biologicaldamage due to environmental degradation. Effect of pollution due to thermal power station,nuclearpowergeneration,hydroelectricpowerstationsonecologyandenvironment.

UNIT-II(12hrs)

- 3. GlobalEnergyScenario:** Energyconsumptioninvarioussectors,projectedenergyconsumptionforthenextcentury,exponentialincreaseinenergyconsumption,energyresources, coal, oil, natural gas, nuclearand hydroelectric power, impact of exponential riseinenergyusageonglobaleconomy.
- 4. IndianEnergyScene:** EnergyresourcesavailableinIndia,urbanandruralenergyconsumption, energy consumption pattern and its variation as a function of time, nuclearenergy - promise and future, energy as a factor limiting growth, need for use of new andrenewable energysources.

UNIT-III(12hrs)

- 5. Solar energy:** Solar energy, Spectral distribution of radiation, Flat plate collector, solarwater heating system,Applications, Solar cooker. Solar cell, Types of solar cells, Solarmoduleandarray,ComponentsofPVsystem,ApplicationsofsolarPVsystems.
- 6. Wind Energy:** Introduction, Principle of wind energy conversion, Components of windturbines, Operation and characteristics of a wind turbine, Advantages and disadvantages ofwindmills,Applicationsofwindenergy.

UNIT-IV(12hrs)

- 7. Ocean Energy:** Introduction, Principle of ocean thermal energy conversion, Tidal powergeneration, Tidal energy technologies, Energy from waves, Wave energy conversion, Waveenergytechnologies,advantagesanddisadvantages.
- 8. HydrogenEnergy:** Historyofhydrogenenergy-Hydrogenproductionmethods-Electrolysis of water, Hydrogen storage options – Compressed and liquefied gas tanks, Metalhydrides;Hydrogensafety -Problems of hydrogentransportanddistribution- Usesofhydrogenasfuel.

UNIT-V(12hrs)

- 9. Bio-Energy:**

Energy from biomass – Sources of biomass – Different species – Conversion of biomass intofuels – Energy through fermentation – Pyrolysis, gasification and combustion – Aerobic andanaerobic bio-conversion – Properties of biomass – Biogas plants – Types of plants – Designandoperation–Properties andcharacteristics ofbiogas.

Elective Paper-VII-
C: Practical: Renewable Energy 2 hrs/Week

Minimum of 6 experiments to be done and recorded

1. Preparation of copper oxide selective surface by chemical conversion method.
2. Performance testing of solar cooker.
3. Determination of solar constant using pyrheliometer.
4. Measurement of I-V characteristics of solar cell.
5. Study the effect of input light intensity on the performance of solar cell.
6. Study the characteristics of wind.

ENVIRONMENTALEDUCATION

(Totalhours of Teaching – 30Hrs. @ 02Hrs. per Week)

Course objective: A Generic Course intended to create awareness that the life of human beings is an integral part of environment and to inculcate the skills required to protect environment from all sides.

Learning outcomes: On completion of this course the students will be able to

1. Understand the nature, components of an ecosystem and that humans are an integral part of nature.
2. Realize the importance of environment, the goods and services of a healthy biodiversity, dependence of humans on environment.
3. Evaluate the ways and ill effects of destruction of environment, population explosion, ecosystems and global problems consequent to anthropogenic activities.
4. Discuss the laws/acts made by government to prevent pollution, to protect biodiversity and environment as a whole.
5. Acquaint with international agreements and national movements, and realize citizen's role in protecting environment and nature.

Unit1: Environment and Natural Resources

06

- Hrs.**
- 1. Multidisciplinary nature of environmental education; scope and importance.**
 - 2. Manas an integral product and part of the Nature.**
 - 3. A brief account of land, forest and water resources in India and their importance.**

4. Biodiversity: Definition; importance of Biodiversity - ecological, consumptive, productive, social, ethical and moral, aesthetic, and option value.
5. Level of Biodiversity: genetic, species and ecosystem diversity.

Unit-2: Environmental degradation and impacts 10Hrs

1. Human population growth and its impact on environment; land use change, land degradation, soil erosion and desertification.
2. Use and over-exploitation of surface and ground water, construction of dams, floods, conflicts over water (within India).
3. Deforestation: Causes and effects due to expansion of agriculture, firewood, mining, forest fires and building of new habitats.
4. Non-renewable energy resources, their utilization and influences.
5. A brief account of air, water, soil and noise pollutions; Biological, industrial and solid wastes in urban areas. Human health and economic risks.
6. Greenhouse effect - global warming; ocean acidification, ozone layer depletion, acid rains and impact on human communities and agriculture.
7. Threats to biodiversity: Natural calamities, habitat destruction and fragmentation, overexploitation, hunting and poaching, introduction of exotic species, pollution, predator and pest control.

Unit 3: Conservation of Environment 10Hrs

1. Concept of sustainability and sustainable development with judicious use of land, water and forest resources; afforestation.
2. Control measures for various types of pollution; use of renewable and alternate sources of energy.
3. Solid waste management: Control measures of urban and industrial waste.
4. Conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.
5. Environment Laws: Environment Protection Act; Act; Wildlife Protection Act; Forest Conservation Act.
6. International agreements: Montreal and Kyoto protocols; Environmental movements: Bisnois of Rajasthan, Chipko, Silent valley.

Suggested activities to learner:(4hours)

1. Visit to an area to document environmental assets: river/forest/flora/fauna,etc
2. Visit to a local polluted site-Urban/Rural/Industrial/Agricultural site.
3. Study of common plants, insects, birds and basic principles of identification.
4. Study of simple ecosystems-forest, tank, pond, lake, mangroves etc.
5. Case study of a Forest ecosystem or a pond ecosystem.

Suggested textbook:

Syllabus of
SOLARENERGY

Total 30 hrs (02 h/wk),

02 Credits & Max Marks: 50

Learning Outcomes:

After successful completion of the course, students will be able to:

1. Acquire knowledge on solar radiation principles with respect to solar energy estimation.
2. Get familiarized with various collecting techniques of solar energy and its storage
3. Learn the solar photovoltaic technology principles and different types of solar cells for energy conversion and different photovoltaic applications.
4. Understand the working principles of several solar appliances like Solar cookers, Solar hot water systems, Solar dryers, Solar Distillation, Solar greenhouses

SYLLABUS:

UNIT-I–Solar Radiation: (6hrs)

Sun as a source of energy, Solar radiation, Solar radiation at the Earth's surface, Measurement of Solar radiation-Pyro heliometer, Pyranometer, Sunshine recorder, Prediction of available solar radiation, Solar energy-Importance, Storage of solar energy, Solar pond

UNIT-II–Solar Thermal Systems: (10hrs)
Principle of conversion of solar radiation into heat, Collectors used for solar thermal conversion: Flat plate collectors and Concentrating collectors, Solar Thermal Power Plant, Solar cookers, Solar hot water systems, Solar dryers, Solar Distillation, Solar greenhouses.

UNIT-III–Solar Photovoltaic Systems:

(10hrs) Conversion of Solar energy into Electricity - Photovoltaic Effect, Solar photovoltaic cell and its working principle, Different types of Solar cells, Series and parallel connections, Photovoltaic applications: Battery chargers, domestic lighting, street lighting and water pumping

Co-curricular Activities (Hands on Exercises): (04 hrs)

[Any four of the following may be taken up]

1. Plots sun chart and locate the sun at your location for a given time of the day.
2. Analyses shadow effect on incident solar radiation and find out contributors.
3. Connect solar panels in series & parallel and measure voltage and current.
4. Measure intensity of solar radiation using Pyranometer and radiometers.
5. Construct a solar lantern using Solar PV panel (15W)
6. Assemble solar cooker
7. Designing and constructing photovoltaic system for a domestic house requiring 5kVA power
8. Assignments/Model Exam.

ReferenceBooks:

1. Solar Energy Utilization, G.D. Rai, Khanna Publishers
1. Solar Energy - Fundamentals, design, modeling & applications, G.N. Tiwari, Narosa Pub., 2005.
2. Solar Energy - Principles of thermal energy collection & storage, S.P. Sukhatme, Tata McGrawHill Publishers, 1999.
3. Solar Photovoltaics - Fundamentals, technologies and applications, Chetan Singh Solanki, PHI Learning Pvt. Ltd.,
4. Science and Technology of Photovoltaics, P. Jayarama Reddy, BSP Publications, 2004.

B.Sc.,Biotechnology:ChoicebasedcreditsystemB.

Sc.,-IVSemesterW.E.F.2020-21

BT-401(i)PlantandAnimalBiotechnology

CourseObjectives

The objectives of this course are to introduce students to the principles, practices and application of animal biotechnology, plant tissue culture, plant and animal genomics, genetic transformation.

Unit.I

Planttissueculturetechniques&secondarymetabolitesproduction

Plant tissue culture: totipotency, media preparation . nutrients and plant hormones; sterilization techniques; establishment of cultures . callus culture, cell suspension culture , applications of tissue culture-micropropagation; Somatic embryogenesis; synthetic seed production; protoplast culture and somatic hybridization – applications . Cryopreservation , Plant secondary metabolites- concept and their importance

Unit.II

TransgenesisandMolecularmarkers

Plant transformation technology—Agro bacterium mediated Gene transfer (Ti plasmid), hairy root features of Ri plasmid , Transgenic plants as bioreactors. Herbicide resistance . glyphosate , Insect resistance- Bt cotton, Molecular markers - RAPD, RFLP and DNA fingerprinting-principles and applications.

Unit.III

Animaltissueculturetechniques

Animal cell culture: cell culture media and reagents; culture of mammalian cells, tissues and organs; primary culture, secondary culture, cell lines, stem cell cultures; Tests: cell viability and cytotoxicity, Cryopreservation. Transfection methods (calcium phosphate precipitation, electroporation, Microinjection) and applications.

Unit.IV

Transgenicanimals&GeneTherapy

Production of vaccines, diagnostics, hormones and other recombinant DNA products in medicine (insulin, somatostatin, vaccines), IVF, Concept of Gene therapy, Concept of transgenic animals. Merits and demerits-Ethical issues in animal biotechnology

UnitV

Bioethics,BiosafetyandIPR

Bioethics in cloning and stem cell research, Human and animal experimentation, animal rights/welfare. Bio safety-introduction to biological safety cabinets; primary containment for biohazards; biosafety levels; GLP, GMP, Introduction to IPR-Types of IPR: patents, trademarks & copyright.

B.Sc.,Biotechnology:ChoicebasedcreditsystemB.
Sc.,-IVSemester W.E.F.2020-21

BT-

401(ii)Environmental&IndustrialBiotechnologyLearning Objective

This course aims to introduce fundamentals of Environmental Biotechnology. The course will also give an insight in introducing major groups of microorganisms and their industrial applications

Unit.I

PollutionTypesandControl

Environmental Biotechnology-Environmental Pollution: Types of pollution, air pollution & its control through Biotechnology, Bio filters, Bio scrubbers, Bio trickling filter. Water pollution and its management: Measurement of water, pollution, sources of water pollution. Microbiology of wastewater treatment, aerobic processes, activated sludge, oxidation ponds, trickling filters, and rotating biological contactors. Anaerobic processes :Anaerobic digesters, upward flow anaerobic sludge blanket reactors.

UNIT-II

Bioremediation

Biodegradation and Bioremediation. Concepts & principles of Bioremediation, Bioremediation of Hydrocarbons and its applications Degradation of pesticides and other toxic chemicals by microorganism. Role of genetically Engineered microbes

,Concept of Phytoremediation, environmental safety guidelines.

UNIT III

Biofuels

Biofuels-

biogas,microbial groups involved in biogas production & interactions,factors affecting biogas production,Biofertilizers,Vermiculture.

Unit IV

Basic principles of Microbial technology

Industrially important microbes, its screening, selection and identification. Maintenance and preservation of industrially important microbial cultures. Strain Improvement, Basic concepts of fermentation; Design of fermenter and applications

Unit V

Commercial Production of Microbial products

Microbial technology products and applications; Microbial production of Organic acids (Lactic acid, citric acid), Amino acids (Glutamic acid, Aspartic acid and Lysine). Fermentation by microbes for food additives: dairy products (Cheese, Yogurt), beverages (Beer, Wine) and antibiotics (Streptomycin, Penicillin) in animal and plant biotechnology and their applications.

Vth SEMESTER PAPERS

**THERE WILL BE THREE PAIRS OF EACH DOMAIN OF
CORE COURSE. STUDENT HAS TO CHOOSE ONE PAIR FROM
EACH DOMAIN.**

A-PAIR

B.Sc MICROBIOLOGY (CBCS) REVISED SYLLABUS -2020

MBTA1-FOOD, AGRICULTURE AND ENVIRONMENTAL MICROBIOLOGY

UNIT-1

No.ofHours:8

Intrinsic and extrinsic parameters that affect microbial growth in foodMicrobials spoilage of food-fruits, vegetables, milk, meat, egg, bread and canned foodsFood intoxication (botulism). Food-bornediseases(salmonellosis)and their detection.

UNIT- II

No.ofHours:8

Principles of food preservation - Physical and chemical methods.Fermented Dairy foods – cheese and yogurt. Microorganisms as food – SCP, edible mushrooms (white button, oyster and paddy straw). Probiotics and their benefits.

UNIT- III

No.ofHours:8

Soil Microbiology: Microbial groups in soil, microbial transformations of carbon, nitrogen, phosphorus and Sulphur, Biological nitrogen fixation. Microflora of Rhizosphere and Phyllo sphaeric microflora, microbes in composting. Importance of mycorrhizal inoculums, types of mycorrhizae as associated plants, mass in inoculums. Production of VAM, field applications of Ectomycorrhiza.

UNIT-IV

No.ofHours:8

Beneficial microorganisms in Agriculture: Biofertilizer (Bacterial, Cyanobacterial and Fungal), microbial insecticides, Microbial agents for control of Plant diseases, Biodegradation, Biogas production, Biodegradable plastics, Plant-Microbe interactions. Diseases caused by bacteria and fungi to various commercial and food crops (2 examples each) Management of soil biota for maintaining soil fertility. Conversion of wastelands into fertile lands. Management of soil nutrients.

UNIT-V

No. of Hours:12

Terrestrial Environment: Soil profile and soil microflora. Aquatic Environment: Microflora of

fresh water and marine habitats. Atmosphere: Aeromicroflora and dispersal of microbes. Extremophiles. Nutrient cycling - Carbon, nitrogen, phosphorus. Methods to detect portability of water samples. Outlines of Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill). Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary and tertiary sewage treatment.

CourseObjectives

The objectives of this course are to introduce students to the principles, practices and application of animal biotechnology, plant tissue culture, plant and animal genomics, genetic transformation.

Unit.I

Planttissueculturetechniques&secondarymetabolitesproduction

Plant tissue culture: totipotency, media preparation . nutrients and plant hormones; sterilization techniques; establishment of cultures . callus culture, cell suspension culture , applications of tissue culture-micropropagation; Somatic embryogenesis; synthetic seed production; protoplast culture and somatic hybridization – applications . Cryopreservation , Plant secondary metabolites- concept and their importance

Unit.II

TransgenesisandMolecularmarkers

Plant transformation technology—Agro bacterium mediated Gene transfer (Ti plasmid), hairy root features of Ri plasmid , Transgenic plants as bioreactors. Herbicide resistance . glyphosate , Insect resistance- Bt cotton, Molecular markers - RAPD, RFLP and DNA fingerprinting-principles and applications.

Unit.III

Animaltissueculturetechniques

Animal cell culture: cell culture media and reagents; culture of mammalian cells, tissues and organs; primary culture, secondary culture, cell lines, stem cell cultures; Tests: cell viability and cytotoxicity, Cryopreservation. Transfection methods (calcium phosphate precipitation, electroporation, Microinjection) and applications.

Unit.IV

Transgenicanimals&GeneTherapy

Production of vaccines, diagnostics, hormones and other recombinant DNA products in medicine (insulin, somatostatin, vaccines), IVF, Concept of Gene therapy, Concept of transgenic animals. Merits and demerits-Ethical issues in animal biotechnology

UnitV

Bioethics,BiosafetyandIPR

Bioethics in cloning and stem cell research, Human and animal experimentation, animal rights/welfare. Bio safety-introduction to biological safety cabinets; primary containment for biohazards; biosafety levels; GLP, GMP, Introduction to IPR-Types of IPR: patents, trademarks & copyright.

B.Sc.,Biotechnology:ChoicebasedcreditsystemB.
Sc.,-IVSemester W.E.F.2020-21

BT-

401(ii)Environmental&IndustrialBiotechnologyLearning Objective

This course aims to introduce fundamentals of Environmental Biotechnology. The course will also give an insight in introducing major groups of microorganisms and their industrial applications

Unit.I

PollutionTypesandControl

Environmental Biotechnology-Environmental Pollution: Types of pollution, air pollution & its control through Biotechnology, Bio filters, Bio scrubbers, Bio trickling filter. Water pollution and its management: Measurement of water, pollution, sources of water pollution. Microbiology of wastewater treatment, aerobic processes, activated sludge, oxidation ponds, trickling filters, and rotating biological contactors. Anaerobic processes :Anaerobic digesters, upward flow anaerobic sludge blanket reactors.

UNIT-II

Bioremediation

Biodegradation and Bioremediation. Concepts & principles of Bioremediation, Bioremediation of Hydrocarbons and its applications Degradation of pesticides and other toxic chemicals by microorganism. Role of genetically Engineered microbes

,Concept of Phytoremediation, environmental safety guidelines.

UNIT III

Biofuels

Biofuels-

biogas, microbial groups involved in biogas production & interactions, factors affecting biogas production, Biofertilizers, Vermiculture.

Unit IV

Basic principles of Microbial technology

Industrially important microbes, its screening, selection and identification. Maintenance and preservation of industrially important microbial cultures. Strain Improvement, Basic concepts of fermentation; Design of fermenter and applications

Unit V

Commercial Production of Microbial products

Microbial technology products and applications; Microbial production of Organic acids (Lactic acid, citric acid), Amino acids (Glutamic acid, Aspartic acid and Lysine). Fermentation by microbes for food additives: dairy products (Cheese, Yogurt), beverages (Beer, Wine) and antibiotics (Streptomycin, Penicillin) in animal and plant biotechnology and their applications.

Vth SEMESTER PAPERS

THERE WILL BE THREE PAIRS OF EACH DOMAIN OF CORE COURSE. STUDENT HAS TO CHOOSE ONE PAIR FROM EACH DOMAIN.

A-PAIR

B.Sc MICROBIOLOGY(CBCS)REVISED SYLLABUS-2020

MBTA1-

FOOD, AGRICULTURE AND ENVIRONMENTAL MICROBIOLOGY

UNIT-1

No.ofHours:8

Intrinsic and extrinsic parameters that affect microbial growth in foodMicrobial spoilage of food-fruits, vegetables, milk, meat, egg, bread and canned foodsFood intoxication (botulism). Food-borne diseases(salmonellosis) and their detection.

UNIT- II

No.ofHours:8

Principles of food preservation - Physical and chemical methods. Fermented Dairy foods – cheese and yogurt.

Microorganisms as food – SCP, edible mushrooms (white button, oyster and paddy straw). Probiotics and their benefits.

UNIT-III

No.ofHours:8

Soil Microbiology: Microbial groups in soil, microbial transformations of carbon, nitrogen, phosphorus and sulphur, Biological nitrogen fixation. Microflora of Rhizosphere and Phyllosphere microflora, microbes in composting. Importance of

mycorrhizal inoculums, types of mycorrhizae associated plants, mass inoculums. Production of VAM, field applications of Ectomycorrhizae and VAM.

UNIT-IV

No.ofHours:8

Beneficial microorganisms in Agriculture: Biofertilizer (Bacterial, Cyanobacterial and Fungal), microbial insecticides, Microbial agents for control of Plant diseases, Biodegradation, Biogas production, Biodegradable plastics, Plant-Microbe interactions. Diseases caused by bacteria and fungi to various commercial and food crops (2 examples each) Management of soil biota for maintaining soil fertility. Conversion of wastelands into fertile lands. Management of soil nutrients.

UNIT-V

No. of Hours:12

Terrestrial Environment: Soil profile and soil microflora. Aquatic Environment: Microflora of fresh water and marine habitats. Atmosphere: Aeromicroflora and dispersal of microbes. Extremophiles. Nutrient cycling-Carbon, nitrogen, phosphorus. Methods to detect portability of water samples. Outlines of Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill). Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary and tertiary sewage treatment.
